PowerCom

STS Static Transfer Switch 15-600A

Redundant System

Power is supplied by 2 separate supply circuits that are fully independent and that can be replaced during normal operatoion (hot replacement mode) without any risk of casuing power supply interruptions to the load. In the unlikely event of a failure at one of both power supplies, the full operation is provided by the "Power Supply Backup" function, which offers auxiliary power supply to the circuits from an external, independent power source. The STS is equipped with redundant ventilation system.

Applications

Local Area Networks, Cash Registers, Tax, Telecom Postal, Radio and Television, SecurityTraffic, Electricity Medical, Industrial Control, National Defense, Petrochemical, Ports and other important economic data centre.

Working Principle

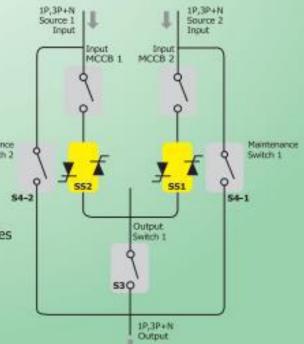

The Vision STS allows the load to switch between alternative and independant power sources for guaranteed redundant power. The Switch can be automatic (when a source falls outside the acceptable tolerance) or manually through the front panel control.

Specifications

High reliability
Hot swap function
Automatic static switching
Increase of the power quality
Superior short circuit protection
Protection against power supply faults
Protection against overloads and load faults
Redundant power mode
Total control by microprocessor
Advanced communication LCD display such as status, alamrs, information...
Power event logging
Easy static and mechanical transfer to input sources

Options:

RS485 TCP/IP connection 2 serial ports 1 years warranty (electronics)

STS is with digital SCR. The connection and breaking speed is very fast, it doesn't have arc phenomenon.

The transfer time of STS is less than 4ms. STS has perfect protection function of overvoltage, undervoltage, power failure, overcurrent and phase difference, ect.

SCR of STS is no contact generated and without arc

phenomenon in starting and stopping, so that prolong the life of system.

System can be compatible with electricity and electricity, electricity and ups, ups and ups, stabilizer and ups System adopt synchronous control technology to ensure consistence in the switch and load equipments.

System can be set by users according to their needs

System is with LED and LCD display.

System has smart audiable and visual alarm function

System with multi functional interface of RS232 & dry contact.

System has extremely strong adaptability of power, which can be compatible with same phase & different phases input at the same time. 19 inch rack mount type and tower type for customers choose.

Technical Data

STS	Model							
	STS50	STS100	STS150	STS200	STS250	STS300	STS400	STS600
Nominal current	50A	100A	150A	200A	250A	300A	400A	600A
— Input							100.100	
Nominal voltage				0-400-415V	THE RESERVE OF THE PARTY OF THE			
Voltage tolerance			1	80-264 VA	C selectable	e		
Switched input phases	3+N (4pole)- 3 (3pole)							
Frequency	50/60Hz							
Frequency range	+/-10% selectable							
Compatibiliy				TT. IT, T	NC, TNS
